

Toyopearl GigaCap® S-650M

for high capacity cation exchange chromatography of IgG

TOYOPEARL
PRODUCT OVERVIEW

Introduction

Toyopearl GigaCap S-650M is the first in a family of ion exchange resins* optimized for high throughput chromatography of IgG. Its base bead is Toyopearl HW-65C which has a particle size range of 50-100 µm. This particle size range has outstanding pressure flow characteristics for high throughput IgG purification.

The high capacity for lysozyme shows that Toyopearl GigaCap S-650M will be an excellent resin for smaller proteins as well.

Product Highlights

- **High Dynamic Binding Capacity** (Table 1 & Figure 1)
 - Typical dynamic capacities of 140+ mg IgG/mL resin (at 212 cm/hr) with high 98-99% recoveries
 - Typical dynamic binding capacities of 160+ mg lysozyme/mL resin
- **Excellent Pressure Flow Characteristics**
 - Maximum back pressure tolerance rating of 3 bar
 - Can be used at high linear velocities
- **Excellent chemical stability when exposed to 1.0mol/L NaOH**
 - Minimal loss of IgG capacity with high recovery after 5 weeks of storage (Figure 2)
 - Minimal loss of capacity after 50 CIPs (1 hour dwell time) (Table 2)
- **Optimized particle size for improved fluid dynamics over agarose materials**
 - Narrow particle size range of 50-100 µm
 - Benefits:
 - Higher elution concentrations
 - Enhanced resolution for improved purities
